

FROST *Fighter* PORTABLE HEATERS

Prevent Freeze ups....Improve Fuel Efficiencies

The Optional Heat Recovery System (HRS) from Frost Fighter reduces nuisance service calls in applications affected by severe cold, precipitation and condensation.

By drawing heated air from the discharge end, back to a fully enclosed housing designed to retain the warm dry air and shield the fuel pump, filter, fuel lines and solenoid from the elements provides less down time and service calls...which equals lost time and money!

In addition, your customers will appreciate the improved fuel efficiency benefit that will take project costs out of their system!

Cold weather is approaching....check out our library of service/technical videos to ensure your Frost Fighter fleet is ready to go....
